

INGEAR

An Easy Route >>

The best route doesn't have to be the hardest route when creating a wireless network for your home or small office. Consider the Linksys WRT55AG wireless A+G broadband router to connect Ethernet and the three Wi-Fi standards. Features include a four-port Ethernet switch, 802.11a and 802.11g access points, and a top-notch security package.

Linksys WRT55AG, US\$299.99; www.linksys.com.

Built to Flip

Finding a mobile phone loaded with features isn't hard, but finding one that has features you'll use is. Samsung's latest, the SPH-A600, offers an innovative approach to making the most of the phone's digital camera and 65,000-color TFT display. Just flip it open and swivel the screen to share images with friends or identify callers via picture ID.

A Better Mouse Pad

There's no getting rid of mice, despite the acrobatics we often go through to use them, and the sore wrists and shoulders that they can cause. OZ Enterprises offers an innovative solution with its Flite Tech mouse pad. Designed by an F-16 fighter pilot, this 6-by-7-inch mouse pad mounts to your leg to provide the proper alignment of your hand, arm, and shoulder.

Sound the Alarm

It doesn't look imposing, but activate the 120 dB alarm and you'll hear why the Sonic Shock could be just what you need to secure your video projectors and plasma displays. The alarm works by fusing a stainless steel base plate to the item, which is then attached to an immovable object via a sensor loop.

When the sensor loop is cut, the alarm sounds.
